ABSTRACT OF THE DISCLOSURE

2	A connector includes a connector seat combined with an operation
3	member and including a main body, a movable rod, a positioning ball, and at
4	least one spring. Thus, the main body is movable relative to the operation seat
5	of the operation member to retract the positioning ball into the receiving cavity
6	of the movable rod, so that the socket can be mounted on and detached from
7	the connector easily and conveniently, thereby saving the manual work.
